

Isolated by construction, consent-aware by design, auditable end to end.

Every record is scoped to your tenant and isolation is enforced in the database itself. We do not become your system of record, message your recipients, or train shared models on your data.

ISOLATION

Isolation-first

Enforced in the database with row-level security, not only in application code.

CONSENT

Suppression gates all

Suppression status gates prediction and writeback. The ratchet is one-way; we never auto-un-suppress.

AUDITABILITY

Reversible writeback

Credentials encrypted at rest. Every write logged with model version, reversible, kill-switched.

Request the security pack and DPA.

SOC 2 readiness in progress. Early access; we show you exactly what is in place today.
