

Isolated by **construction**, consent-aware by **design**, auditable **end to end**.

Every record is scoped to your tenant and isolation is enforced in the database itself. We do not become your system of record, message your recipients, or train shared models on your data.

ISOLATION	CONSENT	CONTROL
Tenant-scoped rows	Do not contact	Off by default
RLS in the database	Do not predict	Autopilot is earned
Cross-tenant reads	Consent basis	Every write logged
		Undo in one click
THE TEST Nothing crosses tenants	DEFAULT POSTURE Fail closed	KILL SWITCH Global + per tenant

ISOLATION

Isolation-first

Enforced in the database with row-level security, not only in application code.

CONSENT

Suppression gates all

Suppression status gates prediction and writeback. The ratchet is one-way; we never auto-un-suppress.

CONTROL

Reversible writeback

Credentials encrypted at rest. Every write logged with model version, reversible, kill-switched.

Request the security pack and DPA.

SOC 2 readiness in progress. Early access; we show you exactly what is in place today.
